Mostafa Ghorbandoost

Personal Website : http://pythinker.github.io Email : mos.ghorbandoost@gmail.com
Professional Links : Google Scholar / LinkedIn / GitHub

Education

- **M.Sc. in Electrical Engineering, Communication Systems** Sep. 2011 – Oct. 2013
  School of Electrical Engineering, Amirkabir University of Technology *Tehran, Iran*
  - **Thesis**: Reducing the Number of Training Sentences in Parallel Voice Conversion ...
- **B.Sc. in Electrical Engineering, Electronics** Sep. 2007 – Sep. 2011
  School of Electrical Engineering, Amirkabir University of Technology *Tehran, Iran*
  - **Thesis**: Design and Implementation of a 10 Mbps Modulator

Experience

- **Data Scientist** Dec. 2020 - Present
  Bama.ir *Tehran, Iran*
  - **Price Estimation**: Built a thorough regression model to estimate used cars' prices from different brands using their age, mileage, body status and other attributes (about 10 in total)
  - **Feature Engineering**: Massively mined, manipulated and combined millions of adverts in order to build proper features from their attributes to train more accurate and interpretable regression models
  - **Robust Regression**: Made good use of robust regression techniques and borrowed some ideas from quantile regression to handle outliers in adverts' suggested prices by customers
  - **Responsible AI**: Trained responsible regression models by injecting relevant domain (expert) knowledge into them so that they behave according to experts' expectations
- **Machine Learning Researcher** Sep. 2017 - Dec. 2020
  MAPNA Group *Karaj, Iran*
  - **Representation Learning**: Used probabilistic methods to obtain meaningful and disentangled representations of power plant's high dimensional sensor data for visualization and classification
  - **Transfer Learning**: Employed GANs and Variational AutoEncoders to adapt trained classification and regression models to new and unseen environmental conditions
  - **Anomaly Detection**: Utilized Variational AutoEncoders to distinguish normal behavior of a power plant from its faulty behavior to prevent unpredictable breakdowns
  - **Anomaly Generation**: Designed an anomaly generation system based on Variational AutoEncoders and used it to evaluate anomaly detection and fault classification models
- **Natural Language Processing Engineer** May. 2017 - Sep. 2017
  NueMD (Remote) *Tehran, Iran*
  - **Multi-label Text Classification**: Used Long Short-Term Memory (LSTM) networks and deep learning techniques to classify medical texts for Automated Medical Coding task
  - **Word Embedding**: Trained Skip-Gram and CBOW embeddings on thousands of medical texts to better suit the medical applications than pre-trained word2vecs
- **Digital Designer** Oct. 2016 - May. 2017
  FANA. Co. *Tehran, Iran*
  - **Forward Error Correction**: Implemented Reed-Solomon error correction for Optical Transform Network to enhance the effective range of transmission using Verilog and Altera Stratix-V FPGAs
- **Machine Learning Practitioner** Mar. 2016 - Oct. 2016
  Freelancing *Tehran, Iran*
  - **Human Gesture Recognition**: Classified sequences of 12 gestures captured through Microsoft Kinect using left-to-right Hidden Markov Models with high accuracy
  - **Speaker Verification**: Authenticated the identity of a person through his voice using speech spectral features and Universal Background Model which is a particular type of GMM

- **Machine Learning Researcher** Sep. 2012 - Jan. 2015
  Multimedia Signal Processing Research Lab at Amirkabir University of Technology *Tehran, Iran*
  - **Voice Conversion**: Used a variety of probabilistic and Bayesian regression techniques to change a speaker's identity to mimic another speaker without changing the language contents of his utterances
  - **Mixture Models**: Employed a variety of mixture models from Gaussian Mixture Regression to Mixture Density Networks to better capture the multi-modal nature of speech signal while doing regression
  - **Dynamic Bayesian Networks**: Deployed dynamic linear Gaussian models (Inference by Kalman filtering) as a powerful form of DBNs to model sequential relationships in speech and convert it without loss of continuity
  - **Speech Analysis/Synthesis**: Extracted and modified low-dimensional representative features (MFCC, LSF, MCC) from high-dimensional speech spectrum for the voice conversion task

Awards and Honors

- **Ranked 177 among 96,000 Data Scientists** May. 2021
  Data Science Q&A website; User name: pythinker *Stack Exchange*
- **Winner of Bronze Medal** Sep. 2006
  National Physics Olympiad *Tehran, Iran*

Professional Training

- **Python for Data Science** Dec. 2018
  Laitec Training Center *Tehran, Iran*
- **Linux LPIC1** June. 2018
  Anisa Training Center *Tehran, Iran*

Software Skills

Main Operating Systems	Programming Languages	Documentation tools	Vesrion Control
Linux / MS Windows	Python/ MATLAB	LaTeX / Markdown	Git / GitHub

Deep Learning Libraries	Machine Learning Libraries	Data Science Libraries	Plotting Libraries
TensorFlow / Keras	Scikit-learn / XGBoost	Pandas / Numpy	Matplotlib / Plotly

Web App Development	Database Tools	Project Management	Teamworking Tools
Django	SQL / SSMS	Trello	Microsoft Teams
